

Station 1 is the only one high-fidelity station during OSCE 2025. During this station You are going to have an objective „helper”, team member which role can be described as „paramedic”. It is Your role to give orders / recommendations to this person, including monitoring, drugs and some less important technical procedures (e.g. iv acces). This person will do everything You ordered, will do it properly, and will not do anything else. Please, avoid ordering to this person most important tasks in the station e.g. defibrillation.
