

Medical University of Białystok

In the heart of Białystok, within the modern halls, laboratories, and creative spaces of the Medical University of Białystok (an Associated Partner of EUNICE European University), we are opening the doors to a project that brings together students, doctoral candidates, and academic staff from universities across Europe. Here, in an atmosphere of openness and collaboration, we create a space for developing the skills that shape the future of science, innovation, and education.

Our specialized courses are designed for those who want to broaden their horizons, strengthen practical competencies, and build international connections. Each session is an opportunity to learn from our experts, work with state-of-the-art infrastructure, and exchange experiences with participants representing diverse fields and academic cultures.

We invite you to join a project that not only enhances competencies but also inspires bold thinking and the creation of new pathways for growth. Białystok is ready to become your place of discovery.

Medical University of Białystok

Proteomics: from sample preparation to data interpretation (21–25 September 2026)

- handling biological materials,
- preparing samples,
- conducting LC-MS/MS analysis,
- identifying proteins,
- culminating in the interpretation
