

## Medical University of Bialystok

In the heart of Bialystok, within the modern halls, laboratories, and creative spaces of the Medical University of Bialystok (an Associated Partner of EUNICE European University), we are opening the doors to a project that brings together students, doctoral candidates, and academic staff from universities across Europe. Here, in an atmosphere of openness and collaboration, we create a space for developing the skills that shape the future of science, innovation, and education.

Our specialized courses are designed for those who want to broaden their horizons, strengthen practical competencies, and build international connections. Each session is an opportunity to learn from our experts, work with state-of-the-art infrastructure, and exchange experiences with participants representing diverse fields and academic cultures.

We invite you to join a project that not only enhances competencies but also inspires bold thinking and the creation of new pathways for growth. Bialystok is ready to become your place of discovery.

**The nearest implementation period is Round I, which includes the following titles:**

**1. Food Design/Designing functional food (23–26 February 2026)**

- Training conducted by employees of the Department of Bromatology at the Medical University of Bialystok.
- The training could be conducted in the form of a lecture or and in a practical format (e.g. using the design thinking method or in a laboratory).

## **Medical University of Białystok**

- I. Trends in functional food development – market overview, innovation directions, consumer needs.
- II. Stages of product design – from identifying health goals to selecting bioactive ingredients and evaluating product quality.
- III. Practical session – creating a functional food concept using the Design Thinking method.

### **2. Nanotechnology (17–19 March 2026)**

- Training courses offered by the Faculty of Health Sciences (Department of Psychology and Philosophy) Training courses offered by the Faculty of Health Sciences (Department of Psychology and Philosophy) in cooperation with the University of Białystok
- training conducted by the Medical University of Białystok experts with support of staff University of Białystok.
- The training consists of a practical part and a tour of the BioNanoTechno Centre at the University of Białystok.

### **3. How your brain works - aspects of neuropsychology and neuroscience (9–10 March 2026)**

- Training courses offered by the Faculty of Health Sciences (Department of Psychology and Philosophy)
- The training is led by a fully trained clinical psychologist and a native speaker of English
- Sessions will be illustrated with case studies and video examples.
- I. What is neuropsychology? Understanding the basic structure and function of the brain.
- II. Key neuropsychological concepts: cognition, memory, emotion, attention, and executive function. How neuropsychology explains behaviour in terms of these functions.
- III. Explore how neuroscience explains everyday behaviours and decision-making. Developing critical thinking skills about interpreting behaviours in everyday life.
- IV. Developing curiosity about the brain's role in perception, behaviour, and social interactions.
- V. Recognizing the influence of lifestyle factors on brain health.

## **Medical University of Bialystok**

### **4. Understanding incomprehensible behaviours - a neuropsychological perspective (11–12 March 2026)**

- Training courses offered by the Faculty of Health Sciences (Department of Psychology and Philosophy)
- The training is led by a fully trained clinical psychologist and a native speaker of English
- Sessions will be illustrated with case studies and video examples
- Understanding how brain damage can produce unusual or “strange” behaviours.
- Key neuropsychological concepts related to brain-behaviour relationships.
- Distinguish between behaviours caused by brain damage versus socially unusual behaviours.
- Develop observational and critical thinking skills for interpreting behaviour.
- Gain insight into ethical, social, and cultural considerations in interpreting these behaviours.

### **5. Dementia as an interdisciplinary problem in older patients- determinants, diagnostics, therapy and care problems (24–25 March 2026)**

- Training courses offered by the Faculty of Health Sciences (Department of Geriatrics)
- Potential recipients: (future) doctors, nurses, psychologists, physiotherapists/occupational therapists, pharmacists and other interested parties
- The scope of training covers issues such as: conditions, diagnostics, therapy and care issue
- I. Clinical Foundations of Dementia.
- II. Main Types of Dementia – Practical Implications.
- III. Therapeutic Management – An Interdisciplinary Approach (Dementia – Pharmacological Management, Indications and limitations of treatment, management of neuropsychiatric symptoms, polypharmacy, Cognitive stimulation, environmental adaptations, Everyday Challenges, Practical strategies, crisis situations, non-pharmacological first-line approaches, team-based management, case studies).
- IV. Care, Caregivers, and Society (Dementia as a Caregiving Task – Providing Everyday Care, Assistance with activities of daily living, Ethical and Legal Aspects of Dementia Care, Decision-making capacity, More Than Care: Belonging and Participation in Dementia, Social inclusion, dementia-friendly communities, community-based resources, maintaining dignity and participation).
